## Skills

**Languages** | JavaScript, Ruby, Python, Go, C, C++, Scala, SQL

**Technologies** | Node.js, Rails, React, GraphQL, Pyramid, Docker, PostgreSQL, MongoDB, Flutter, Apollo

## Experience

### Software Engineering Intern | Flight Deck - Royal Canadian Air Force

May 2020 - September 2020

- Transformed the central interface used by **1600+ aircrew daily** to track missions, **saving 2h per mission**, reducing data entry by **24% on 80k data points**, resulting in **5000 hours and \$300k saved** for the Air Force in 2 months
- Developed + shipped** passport management application for **3100+ aircrew**, as a Rails/React microservice
- Spearheaded creation/adoption of GraphQL API, **lowering load time significantly** by eliminating waterfall requests
- Individually introduced HMR with webpacker, and restructured Docker workflow, **cutting startup time by 240%**

### Software Engineering Intern | Tamvoes Health Inc.

March 2020 - August 2020

- Architected, **developed and shipped entire payment infrastructure** for user subscriptions, utilizing **webhooks**
- Built **15+ REST APIs** in Pyramid, interacting with frontend Node.js server, PostgreSQL database, Redis, and Stripe
- Doubled registration rate** on landing page by revamping UI and utilizing local storage to curate user experience
- Implemented internationalization site-wide with i18n and jQuery, **adding 52 countries to potential client base**

### Full Stack Developer | ETHGlobal

December 2019 - February 2020

- Developed a geocaching app gamifying city exploration for **800+ hackers** at ETHDenver, compensating users with tokens based on physical proximity to events, while recording transactions on a **blockchain built in Go**
- Migrated ETHWaterloo (hackathon) winning prototype's Flask API to Node.js/Express

### Founder | Edmonds Engineered

June 2018 - January 2020

- Founded edmondsengineered.com to help develop self-starting attitudes in highly under-privileged community
- Conceived and hosted 2 STEM Camps over 2 years for **150+ youth**
- Remotely led team of 5 developers in building educational, cross-platform Flutter based application

## Projects

### Go2Balancer | Concurrent TCP Load Balancer | *Net* | 🐹

- Built a lightweight TCP load balancer in Go using goroutines to concurrently handle large workloads
- Implemented a novel algorithm to optimally choose backend server with least active connections

### COVID My Tweets | Covid-19 Sentiment Visualization | *Flask, Node.js, MongoDB* | 🐹 🍌

- Developed algorithm to identify statistically significant geographic trends in social media sentiment towards Covid
- Featured self-updating heat map of North America, search feature for sentiment of any city

### UnderratedTunes | Social Platform for Music Lovers | *Node.js, Express, MongoDB, Bootstrap* | 🐹

- Created underratedtunes.com, a platform connecting **100+** music-lovers posting/discussing underrated music
- Used Spotify API data to promote least popular songs to top of page, and generate posts for authenticated users

### Fun Guy Home Security | Remote Home Security | *Swift, Particle Photon* | 🐹

- Built iOS app allowing users to remotely toggle door locks, using Particle Photon and a PIR motion sensor
- Notified homeowners of break-ins with in-app notifications and text messages through Twilio

## Education

University of Waterloo | Bachelor of Software Engineering (B.SE)

September 2019 - Present

Software Engineering Entrance Scholarship
